

HELIUS

XRF Analyser

The power to see beyond the light

QUICK
RELIABLE
NON-DESTRUCTIVE

HELIUS is the first in the series of ARUN's XRF handheld spectrometers. Using X-ray fluorescence analysis technology, this mid-size instrument analyses products of various materials quickly, reliably, and non-destructively. Weighing 1.51kg; this is the lightest amongst other devices in the market.

Since the introduction of XRF spectrometry in the 1950s, it has been a proven and popular technique for metal analysis and is widely used as an efficient means in quality control for many metal processing facilities.

The HELIUS XRF series of metal analysers are a good choice for analysis in many fields; delivering rapid and accurate results right in the palm of your hand. Due to the advanced electronics and state-of-the-art mathematical algorithms, the HELIUS XRF instruments provide ultimate quality of measurement within a couple of seconds. It is the ideal solution for checking and analysing incoming materials, finished goods and in-process production parts in a non-destructive way.

The HELIUS (XRF) is available in 3 models: 300, 600 and 900. All have an excite source of 50KV/4W Ag Anode, max. 80uA x-ray tube.

HELIUS 300 and 600 are calibrated for either alloys (**Cast**), precious metals (**Kt**) or minerals (**Geo**). The HELIUS 300 and 600 (**Cast**) models are calibrated for Fe, Cu, Ni and Ti. If other bases are required for precious metals or minerals, this can be configured.

The HELIUS 900 is calibrated for either alloys (**Cast**) or minerals (**Geo**). The HELIUS 900 (**Cast**) model include Mg, Al, Si, P, and S light elements and Al-based alloys.

HELIUS
300
Cast
Kt
Geo

This low-end version XRF has an Si-Pin detector with no light element detection. This is a good instrument for getting grade identification of metals in seconds without extensive analysis. With its simple pass/fail sorting mode, this is ideal for the quick incoming inspection of materials.

HELIUS
600
Cast
Kt
Geo

This mid-range version has a built-in top end SDD detector. It provides reliable results in as little as 2 seconds for most alloys. It is the ideal instrument for scrap metals sorting and positive materials identification.

HELIUS
900
Cast
Geo

This high-end version with SDD technology provides reliable results of non-metallic materials in seconds. It is the ideal analyser for environmental and RoHS compliance screening and geological inspections.

ANYTIME ANYWHERE

The ergonomic design, light weight and small size are a good balance in the hand. The tapered test head can easily detect curved or corner parts, such as welds. The large capacity battery ensures work can be carried out for as long as 10-12 hours.

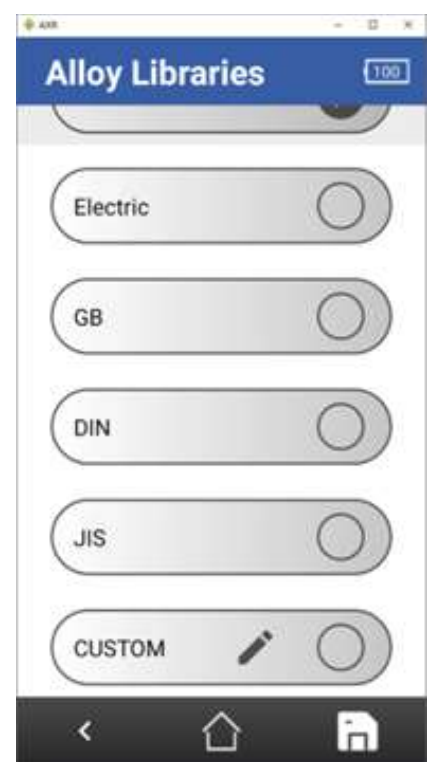

The 5.5" colour touch screen with backlight function will allow the user to see the screen in sun-lit conditions. Touch screen gloves can be worn while manoeuvring through the screen functions.

It has the most comprehensive grade library which includes AISI, DIN, JIS and GB grades, covering more than 1,600 alloys. The user can modify the existing grade library, add new grades or customise the library.

Up to 100,000 test results of storage space, including spectrograms and sample images.

Results and reporting data can easily be transmitted over to PC by Wifi.

An optional sample camera function is available for accurate test positioning.

TECHNICAL SPECIFICATIONS

Instrument Weight	1.51kg
Instrument Dimensions	22 x 9.1 x 27.6cm 8.66" x 3.58" x 10.86"
Ray Tube	Ag target 50V max. 80 uA max.
Maximum Power of Ray Tube	4W
Filter Wheel	Fixed
Detector Type	190eV
Display Screen	5" colour touch screen
Electronic System	Quad Core
Battery	2 Lithium Ion batteries
Shell Structure	Aluminium alloy: PC and aBS watertight material.
Storage Capacity	8GB SD
Connection	USB and WiFi
Report Production Method	MS Excel and .TXT
PC Software	AXR1.0 software
Operating System	Android
X-ray beam closing method	Air detection sensor off method
Basic Alloy ID Detection Speed	Under 5 seconds
Material Database	1,200+
Small Point Collimator	Optional

STANDARD ACCESSORIES

- Waterproof and shockproof box
- 2 Li-ion batteries
- Instructions + quick instructions
- Cable
- AXR1.0 software
- Charger
- Alternate Kapton window film
- Nylon sheath for instrument carry
- Standardisation sample (316)
- Power adapter (9V 2A)
- Memory stick (32G)
- Wrist band

To assure the continued operation of our spectrometers, ARUN Technology performs yearly service on instruments and has on offer of After-Sales Service & Maintenance Plans. ARUN and its' global channel partners work closely together with the customer to ensure instruments are working to their optimum performance for the longest possible functioning life.
